Algorithm: Circular Linked List for Coach Management

Operations: Add, Remove, and Display Coaches

Step 1: Start the program.

Step 2: Initialize an empty circular linked list by setting **last = NULL**.

Step 3: Display the menu containing the following operations:

- Add a coach
- Remove a coach
- Display all coaches
- Exit

Step 4: Accept the user's choice.

Step 5: If the user selects **Add Coach**:

- Create a new node.
- Enter the coach number.
- If the list is empty, point the new node to itself.
- Otherwise, insert the new coach at the end and update the circular connection.

Step 6: If the user selects **Remove Coach**:

- Enter the coach number to remove.
- Search for the coach in the list.
- If found, delete the node and update the links.
- If not found, display an appropriate message.

Step 7: If the user selects **Display Coaches**, traverse the circular linked list and display all coach numbers.

Step 8: Repeat Steps 3–7 until the user selects **Exit**.

Step 9: Release the allocated memory and stop the program.
